

Taste Twist Terminal

User Guide & Feature Overview

The live point-of-sale, inventory and stock-ledger system for
Taste Twist Grills & Shawarma

Created by KMFT

Aguda / Surulere • Kilo • Arepo

1. What Is Taste Twist Terminal?

Taste Twist Terminal is a private, purpose-built web application for Taste Twist Grills & Shawarma. It replaces manual sales books and paper stock ledgers with one live system that all three branches — Aguda/Surulere, Kilo, and Arepo — use at the same time.

It runs as a real website (not an app-store download), so staff open it in a browser on a phone, tablet, or laptop and always see the same up-to-the-minute data: what's in stock, what's been sold, and what's moved between branches.

Two kinds of accounts use it:

- **Master (you)** — full access from any device, including phone: dashboard, reports, analytics, menu and ingredient management, settings, and every branch's data at once.
- **Branch staff** — desktop/tablet-only access, scoped to their own branch: ring up sales and record their own daily stock counts. Staff cannot see other branches' numbers or the master's reports.

Everything staff enter — a sale, a stock count, a transfer — appears on the master's dashboard within seconds, without anyone needing to refresh the page.

2. How It's Different From a Typical POS

- **A sale is never blocked by stock.** If an ingredient shows zero, the till still lets a staff member complete the order — stock simply goes negative and shows up as a clear warning for the master to investigate, rather than turning away a paying customer at the counter.
- **No customer credit/tab system.** Every sale is paid at checkout with one or more of your payment methods (cash, transfer, card, etc. — split payments supported).
- **Recipe-based inventory.** Each menu item (e.g. Chicken Shawarma) has a recipe of ingredients and quantities. Selling it automatically deducts the right amount of pitta bread, chicken, sauce, etc. from that branch's stock — no manual stock adjustment needed after a sale.

3. Features, Screen by Screen

Dashboard (Master only)

The master's home screen. Shows a live card per branch, a 7-day revenue chart, a low-stock list (ingredients under their minimum level), an excess-stock list (over their set maximum), and today's business-related Bible verse.

- Branch cards update live as sales happen anywhere
- Low-stock and excess-stock lists pull from every branch at once
- Revenue chart gives a quick 7-day trend without opening Reports

Checkout

The till screen every branch uses to ring up orders. Staff tap menu items to build a cart, adjust quantities, and check out with one or more payment methods split across the total.

- Menu items never grey out or block adding to cart, even at zero stock
- Split payments — e.g. part cash, part transfer — on a single sale
- A digital receipt is generated for every completed sale
- A completed sale can be voided/refunded by the master if entered in error

Menu (Master only)

Create and edit menu items — name, price, and the ingredient recipe consumed per sale.

- Recipes drive automatic stock deduction at checkout
- Prices and recipes apply across all branches

Ingredients (Master only)

The master list of every stock item tracked (proteins, bread, sauces, packaging, etc.), including packs-vs-pieces style units, minimum stock and maximum stock thresholds.

- Add, edit, or delete ingredients — changes apply company-wide
- Minimum/maximum thresholds power the Dashboard's low-stock and excess-stock lists

Daily Stock (Staff + Master)

Each branch's own running stock count, editable by that branch's staff every day they resume work — mirroring the paper ledger habit already in use, but shared live with the master.

- Staff record Opening Stock, Stock In, Used, and Closing Stock per ingredient
- Master sees every branch's entries in real time without visiting in person
- Staff can only edit their own branch's stock — not other branches'

Transfers

Move stock between branches (e.g. Aguda sends extra chicken to Kilo) with a full record of what moved, when, and between which branches.

- Keeps each branch's on-hand quantity accurate after a transfer
- Creates a traceable history for stock reconciliation

Purchases

Record new stock coming in from suppliers, updating on-hand quantities and building a purchase history per branch.

- Track supplier, item, quantity and cost per purchase
- Feeds directly into each branch's stock levels

Reports (Master only)

Sales history with a date-range picker, extendable back across the business's full history rather than a fixed recent window, filterable per branch or across all branches.

- Load any custom date range on demand
- Filter by a single branch or view all branches combined

Analytics (Master only)

Higher-level performance views built on top of the sales and stock data, for spotting trends across branches over time.

Settings (Master only)

Manage branches, staff logins, and payment methods.

- Add or remove staff accounts per branch
- Configure the payment methods available at checkout
- Change any account's password

4. How To Navigate

Logging in

Open the Taste Twist Terminal link in any browser. Enter your username and password on the login screen and log in. The master account lands on the Dashboard; staff accounts land directly on Checkout, scoped to their own branch.

Getting around

On a laptop or tablet, the left-hand rail lists every screen you have access to — click any item to switch views. Your name, role, and branch (if staff) are shown at the top of the rail. A green live dot at the bottom confirms the connection to the shared live data is active.

On a phone, the master account gets a compact slide-out navigation drawer — tap the menu icon in the top corner to open it, tap a screen to jump there, and it closes automatically. Staff accounts are desktop/tablet only; opening the link on a phone as staff shows a message asking them to switch to a larger screen, since the till and stock screens are built for that format.

Themes

Each person can pick their own colour theme from the swatches at the bottom of the rail — Ocean, Flame, Forest, Royal, Sunset, or Mono (a calm black/white/grey option). The choice is remembered on that device only, so different staff and the master can each use whichever theme they prefer without affecting anyone else.

Logging out

Use the Log out button at the bottom of the rail. This is worth doing on shared branch devices at the end of a shift.

Staying in sync

There is nothing to refresh manually. Sales rung up at one branch, stock counts entered by staff, transfers, and purchases all appear live for anyone else logged in within a few seconds — including on the master's Dashboard.
